

Steering damper parts kits for self-steering axles series ..LL.

Various parts kits are available for BPW series ..LL self-steering axles. A steering damper is essential under the following operating conditions:

- If the rigid axle to steering axle ratio is 1:1 (2:2)
- If an axle lift is used in a triple bogie
- If the steering pivot mount is connected to a central lubrication system

The steering damper is easy to fit and retrofit. It is mounted using bolts alone (no welding). The attachment holes required on the steering axles are in place. Furthermore, each parts kit comes with an installation drawing.

Steering damper parts kits with steering damper 02.3702.93.00 (Ø 32 mm)		
BPW number	Drawing	Suitable for steering axles with max. 20° steering angle.
05.872.00.50.0	04.000.72987	Drum brake, air suspension above the axle, X = 74.5 only for replacement or steering axles with air suspension mounted above and date of manufacture before 08/98. For current VB suspension.
05.872.00.51.0	04.000.73019	Drum brake, springs below the axle, X = 38.5.
05.872.00.52.0	04.000.92256	Drum brake, springs below the axle, steering pivot centre 970 - 1100, X = 38.5.
05.872.00.53.0	04.000.74453	Drum brake, springs above the axle, X = 110.
05.872.00.55.0	04.000.90438	Drum brake; springs below the axle; drop centre steering axle beam, X = 173.
05.872.00.56.0	04.000.95155	Disc brake with air suspension above the axle, X = 163 / 171 top.
05.872.00.57.0	04.000.97161	Disc brake with leaf suspension above the axle, X = 192 top.
05.872.00.59.0	04.005.10030	Disc brake with air suspension below the axle, X = 45 / 35 / 25 top.

The weight is approx. 2 kg per parts kit.
